

Elective Course & T.A. Requirements for Biochemistry

Advanced Electives:

A passing grade (B- or better) in a total of 1.5 semesters of additional graduate level courses approved by the student's Thesis Advisory Committee, including at least one advanced seminar and one didactic course. In some cases a relevant undergraduate course may be approved.

Teaching Assistantships and Teaching Duties:

The Department funds student stipends in several ways, including research grants, training grants and individual fellowships. In order to preserve equity, all students are required to teach equal amounts, regardless of the source of their individual stipends. The present requirement is 1 semester of assisting. This requirement should be completed by the end of the third academic year (the second year in the Department). Teaching assistant assignments are coordinated through the Biology Department.
