I. PURPOSE

To establish supervision standards, roles, responsibilities and patient care activities of all participants in professional graduate medical and dental education programs of the University of Utah Health Sciences Center (UUHSC) and its affiliated hospitals and clinics.

II. POLICY

This policy establishes the minimum requirements for resident/fellow supervision at UUHSC. Individual training programs may also have additional requirements for their medical staff and residents/fellows.

A. The medical staffs of the University of Utah Hospitals and Clinics (UHC) have overall responsibility for the quality of the professional services provided to patients, including patients under the care of the residents/fellows. It is, therefore, the responsibility of the medical staff to ensure that each resident/fellow is supervised in his/her patient care responsibilities by a LIP (licensed independent practitioner) who has clinical privileges at UHC through the medical staff credentialing process.

B. It is the responsibility of individual program directors to establish detailed written policies describing resident supervision at each postgraduate year for their residency programs. These written descriptions of resident supervision must be distributed annually and/or made readily available (e.g. electronic format) to all residents/fellows and medical staff for each residency program.

C. At all times, patient care will be the responsibility of a licensed independent practitioner with appropriate clinical privileges. The requirements for on-site supervision will be established by the program director for each residency program in accordance with ACGME requirements and will be monitored through periodic departmental reviews, with institutional oversight through the GMEC internal review process. Careful supervision and observation are required to determine the resident’s/fellow’s abilities to perform technical and interpretive procedures and to manage patients.

D. Although they are not licensed independent practitioners, residents/fellows must be given graduated levels of responsibility while assuring quality care for patients. Supervision of residents/fellows should be graded to provide gradually increased responsibility and maturation into the role of a judgmentally sound, technically skilled, and independently functioning credentialed provider. The type of supervision (physical presence of attending physicians, home call backup, etc.) required by residents at
GME 8.1 Resident Supervision

various levels of training must be consistent with the requirement for progressively increasing resident responsibility during a residency program and the applicable program requirements of the individual ACGME RRCs, as well as common standards of patient care.

E. The decision about how each resident’s/fellow’s progressive involvement and independence in patient care activities is determined by the program director. The program director and program faculty must assign the privilege of progressive authority and responsibility, conditional independence, and a supervisory role in patient care delegated to each resident/fellow.

F. In addition, the policy for each program must be in compliance with the following standards:

1. At all times, patient care will be the responsibility of a licensed independent practitioner with appropriate clinical privileges in that health care system.

2. Written descriptions of the roles, responsibilities, and patient care activities of the residents/fellows, by level, are available to medical and health care staff.

3. The descriptions identify mechanisms by which the program director and program faculty make decisions about an individual resident’s/fellow’s progressive involvement and independence. Those parameters may include but may not be limited to: a given number of successfully performed, observed procedures; a total number of procedures or processes performed; the general impression of competence and professionalism perceived by faculty, etc.

4. Delineation of order-writing privileges, including which orders, if any, must be countersigned.

III. DEFINITIONS
The following definitions are used throughout this policy:

A. **Licensed Independent Practitioner (LIP)** – a licensed physician or dentist, or optometrist who is qualified usually by board certification or eligibility to practice his/her specialty or subspecialty independently.

B. **Medical Staff** – a LIP who has been credentialed to provide care in his/her specialty or subspecialty by a hospital.

C. **Resident/Fellow** – a professional post-graduate trainee in a specific specialty or subspecialty.

D. **GMEC (Graduate Medical Education Committee)** – the School of Medicine committee tasked with establishing and implementing policies and procedures regarding the quality of education and the work environment for the residents/fellows in all programs. The committee chair is appointed by the Dean of the School of Medicine and its membership includes representative program directors, residents/fellows, faculty members, program coordinators, affiliate hospital representatives, and invited others.

IV. PROCEDURES
A. All resident/fellow patient care activities are ultimately supervised by credentialed providers ("staff attendings") who are licensed independent practitioners on the medical staff of the University of Utah Hospitals and Clinics or a major participating hospital. In each hospital or clinic where residents and fellows are trained, staff attendings must be credentialed for the specialty care and diagnostic and therapeutic procedures that they are supervising. In each setting, the supervising staff attending is ultimately responsible for the care of the patient.

By exception, supervision of residents/fellows may be performed by physician extenders (e.g., physician assistants or nurse practitioners) with particular expertise in certain diagnostic or therapeutic procedures, if so designated by the program director. Ultimate responsibility for the residents'/fellows’ patient care, in this case, will rest on the credentialed staff who oversees the physician extender’s practice.

Each program director will define the policies in his/her program to specify how residents/fellows in that program progressively become independent in specific patient care activities while still being appropriately supervised by medical staff. A program’s resident supervision policies must be in compliance with The Joint Commission policies on resident supervision. The policy will delineate the role, responsibilities and patient care activities of residents/fellows and will delineate which residents/fellows may write patient care orders, the circumstances under which they may do so (e.g., “all situations”), and what entries if any must be countersigned by a supervisor.

Each program director will complete a listing of resident/fellow clinical activities that are permitted by level of training, the required level of supervision for each activity, and any requirements for performing an activity without direct supervision. Program directors will submit their listing of clinical activities by postgraduate year to the Office of Graduate Medical Education (GME) for review.

B. Levels of supervision must be defined as follows:

1. **Direct Supervision**: the supervising physician is physically present with the resident and patient.

2. **Indirect Supervision**:
   a. with direct supervision immediately available – the supervising physician is physically within the hospital or other site of patient care, and is immediately available to provide Direct Supervision.
   b. with direct supervision available – the supervising physician is not physically present within the hospital or other site of patient care, but is immediately available by means of telephonic and/or electronic modalities, and is available to provide Direct Supervision.

3. **Oversight**: the supervising physician is available to provide review of the procedures/encounters with feedback provided after care is delivered.

C. The program director will ensure that all supervision policies are distributed to and
followed by residents/fellows and the medical staff supervising the residents/fellows. Compliance with the resident supervision policy will be monitored by the program directors.

D. Annually, or more frequently as indicated, the program director will determine if residents can progress to the next higher level of training. The requirements for progression to the next higher level of training will be determined by standards set by each program director. This assessment will be documented in the annual evaluation of the residents/fellows.

V. SUPERVISION OF RESIDENTS/FELLOWS IN THE INPATIENT SETTING

A. All lines of responsibility and authority for inpatient care delivered by inpatient ward or ICU teams are directed to a credentialed staff provider. Residents/fellows should write daily orders on inpatients for whom they are providing care. These orders will be implemented without the co-signature of a staff physician. It is the responsibility of the resident to discuss their orders with the attending staff physician. Attending staff may write orders on all patients under their care. Residents/fellows will follow all local teaching hospital policies for how to write orders and notify nurses, and will follow the “verbal orders” policies of each patient care area.

B. Medical staff supervision of care for hospitalized patients must be documented in the inpatient record.

C. Documentation, in writing, by medical staff must be in accordance with hospital policies. This documentation includes especially: concurrence with the admission, history, physical examination, assessment, treatment plan; orders concurrence with major interventional decisions; concurrence when any major change occurs in the patient’s status, such as transfer into or out of an intensive care unit or changes in “Do Not Resuscitate” status. Documentation, in writing, by residents/fellows must also be in accordance with hospital policies.

VI. SUPERVISION OF RESIDENTS/FELLOWS ON INPATIENT CONSULT TEAMS

All inpatient consultations performed by residents/fellows will be documented in writing, with the name of the responsible staff consultant recorded. The responsible staff consultant must be notified verbally by the resident/fellow doing the consult within an appropriate period of time as defined by the particular consulting service. The consulting staff is responsible for all the recommendations made by the consultant team.

VII. SUPERVISION OF RESIDENTS/FELLOWS IN OUTPATIENT CLINICS

All outpatient visits provided by residents/fellows will be conducted under the supervision of a staff provider. This staff provider will interview and examine the patient at the staff’s discretion, at the resident’s/fellow’s request, or at the patient’s request. The staff provider has full responsibility for care provided, whether or not he/she chooses to verify personally the interview or examination.

VIII. SUPERVISION OF RESIDENTS/FELLOWS IN THE EMERGENCY DEPARTMENT
The responsibility for supervision of residents/fellows providing care in the Emergency Department (ED) to patients who are not admitted to the hospital will be identical to that delineated for outpatient supervision above. The responsibility for supervision of residents/fellows who are called in consultation on patients in the ED will be identical to that delineated for consultation supervision above. Consulting staff should be notified appropriately of ED consultations.

IX. SUPERVISION OF RESIDENTS/FELLOWS PERFORMING PROCEDURES

A resident/fellow will be considered qualified to perform a procedure if, in the judgment of the supervising medical staff and his/her specific training program guidelines, the resident/fellow is competent to perform the procedure safely and effectively. Residents/fellows at certain year levels in a given training program may therefore be approved to perform certain procedures without direct supervision, based upon specific written criteria set forth and defined by the Program Director and found in the Resident Handbook on the GME website: [http://medicine.utah.edu/gme](http://medicine.utah.edu/gme). However, the resident’s/fellow’s medical staff of record will be ultimately responsible for all procedures on inpatients.

In addition, residents/fellows may perform emergency procedures without prior medical staff approval or direct supervision when life or limb would be threatened by delay. All outpatient procedures will have the medical staff of record documented in the procedure note, and that medical staff will be ultimately responsible for the outpatient procedure. Residents/fellows who require the direct presence of a supervisor to perform procedures may be supervised by either medical staff or by more senior residents/fellows who have also been approved by the program to perform the procedure independently.
