The Department of Population Health Sciences (PHS) at the University of Utah is pleased to solicit applications for the PhD program in Population Health Sciences with an emphasis in Clinical and Translational Epidemiology.

The PHS Clinical and Translational Epidemiology (CTE) emphasis is distinguished by its rigorous training in epidemiologic methods and focus on collaboration with clinicians. Not only will students work closely with PHS faculty, but will have the opportunity work alongside health systems researchers, biostatisticians, and basic science and clinical investigators across campus. As part of the program, the students will also complete a rotation with relevant clinicians to gain a better perspective on the clinical and translational implications of their research. Within the CTE emphasis, we aim to train the next generation of researchers with the skills needed to analyze complex issues. Students leave as academic leaders with skills necessary to improve patient and population oriented care.

WHO SHOULD APPLY
Applicants with a background in public health, epidemiology, statistics, psychology, biology or related fields

FUNDING
All students admitted are considered for funding, including international students. Funding includes a tuition waiver, student health insurance, and a stipend.
